* Includes most major brands & models

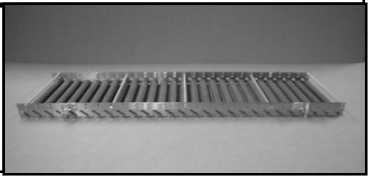

TPF2000v4

Adjustable Height Mounting Systems

Standard TPF System

Standard TPF with leveling bolts

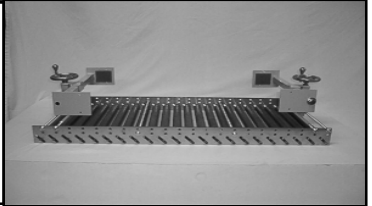

The TPF comes standard with leveling bolts with an adjustability of 1-1/2". These leveling bolts are mounted near the four corners of the TPF and stand on the tunnel conveyor frame within the chamber. This type of mounting is ideal for customers who will be using their shrink tunnel to wrap only thin items or are going to remove the TPF when they are not running thin items.

Optional Mounting Systems

TPF with Clamp type mounting system

These mounting systems are ideal for customers who will be wrapping packages with a variety of thicknesses. With these mounts, the TPF can be easily adjusted from thin packages to packages within 3" on the chamber height.

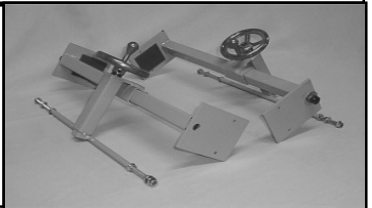

KPC Item 1500

Standard Clamp Type Adjustable Height Mounting System

Clamp type mounting system

These optional mounts clamp to the outside of the chamber (depending on the tunnel model). The TPF is suspended from the mounts by a crank on each end which allows for up to 5.5 inches of vertical adjustment.

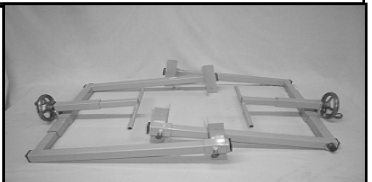

KPC Item 1505

Standard Free Standing Type Adjustable Height Mounting System

Free Standing type mounting system

These optional mounts bolt directly to the tunnel conveyor frame (depending on the tunnel model). The TPF is suspended from the mounts by a crank on each end which allows for up to 5.5 inches of vertical adjustment.

KPC Item 1510

Modified Adjustable Height Mounting System

These AHMS are standard mounts which have been modified for use in tunnels with dimensions outside the normal parameters for height, width, or both. These optional mounts clamp to the outside of the chamber, or bolt directly to the tunnel conveyor frame (depending on the tunnel model). The TPF is suspended from the mounts by a crank on each end.

Replacement Rubber

KPC Item TP35

Replacement Black Silicone Rubber Sleeves

These sleeves are used to re-cover the TPF rollers and are supplied in pieces cut to the specified roller length, or in one continuous piece to be cut to length by the customer
